Task 1 – Create a Custom VPC
Create a VPC named **Training-VPC** with the CIDR block **10.0.0.0/16**.

Task 2 – Create Subnets
Create one **Public Subnet** and one **Private Subnet** with appropriate CIDR blocks in the **same Availability Zone**.

Task 3 – Internet Gateway
Create an **Internet Gateway** and attach it to the **Training-VPC**.

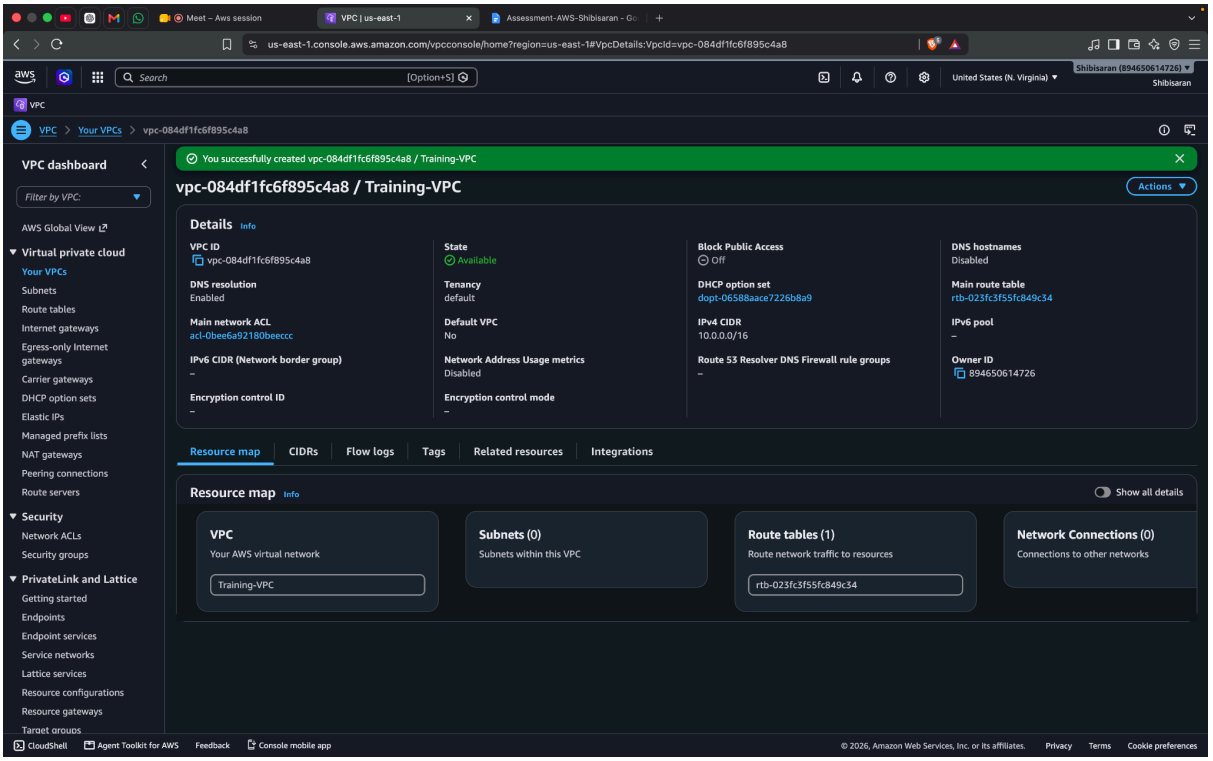

Task 4 – Public Route Table
Create a **Public Route Table**, add a route for Internet access through the **Internet Gateway**, and associate it with the Public Subnet.

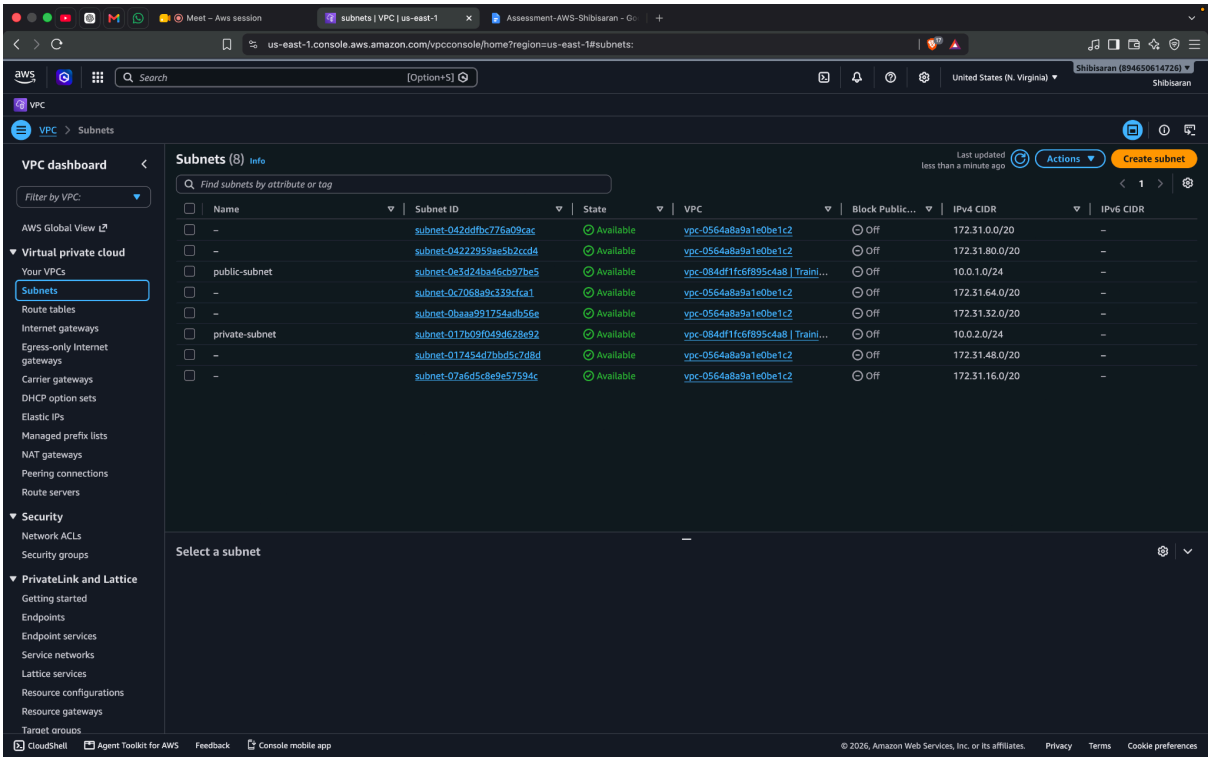

Task 5 – Launch a Public EC2
Launch an **Ubuntu EC2 instance** in the Public Subnet with a public IP and a Security Group allowing SSH access.

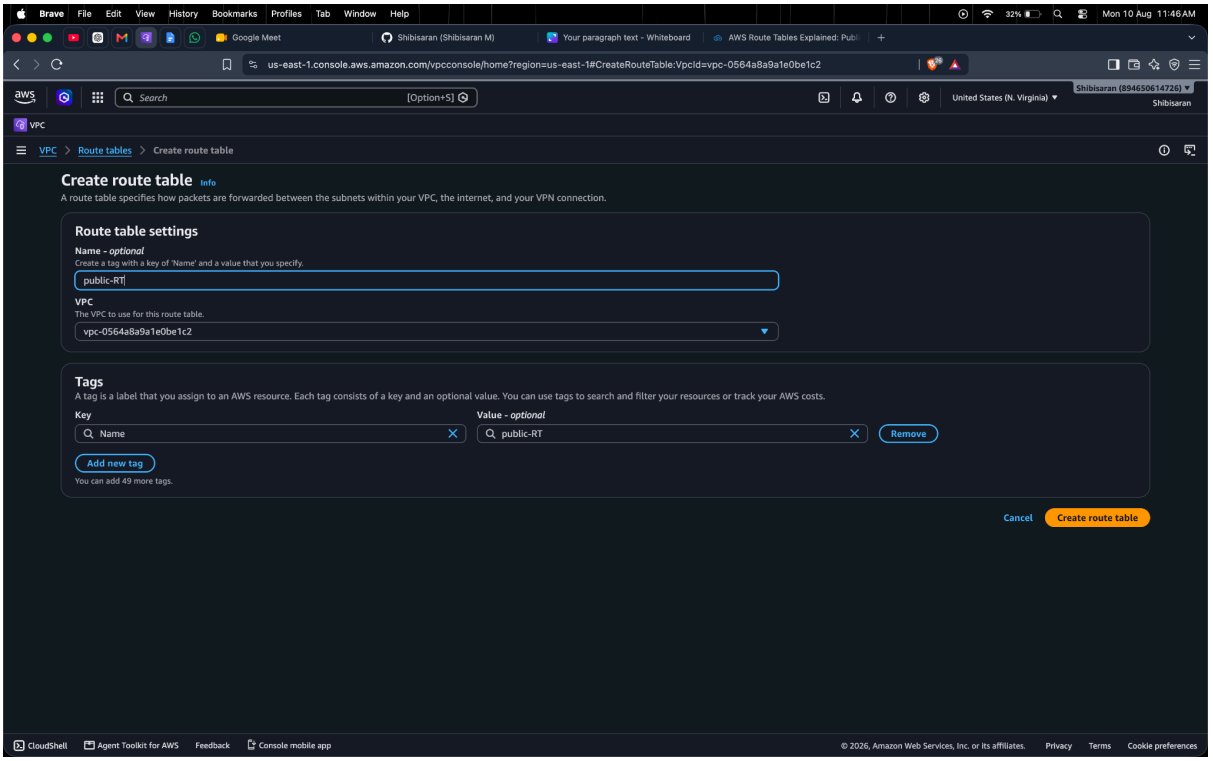

Task 6 – Verify Connectivity
SSH into the Public EC2 instance, install **Apache**, and host a custom HTML webpage.

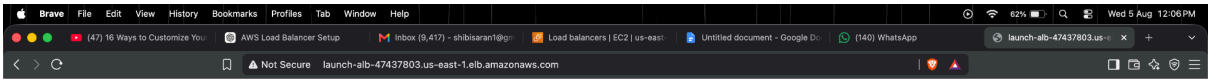

Task 7 – Private Route Table
Create a **Private Route Table** and associate it with the Private Subnet.

Task 8 – NAT Gateway
Create a **NAT Gateway** in the Public Subnet using an Elastic IP and update the Private Route Table to route Internet traffic through it.

Welcome to ASG Server

Create route table
Info
A route table specifies how packets are forwarded between the subnets within your VPC, the internet, and your VPN connection.
Route table settings
Name - optional
Create a tag with a key of 'Name' and a value that you specify.
Private-RT
VPC
The VPC to use for this route table.
vpc-0564a8a9a1e0be1c2
Tags
A tag is a label that you assign to an AWS resource. Each tag consists of a key and an optional value. You can use tags to search and filter your resources or track your AWS costs.

VPC > NAT gateways > Create NAT gateway
NAT gateway settings
Name - optional
Create a tag with a key of 'Name' and a value that you specify.
Private-NAT
The name can be up to 256 characters long.
Availability mode Info
Choose whether to deploy across all zones in the region or restrict to a single availability zone.
Regional - new
Scales automatically across all regional AZs, simplifying management for multi AZ deployments.
Zonal
Provides granular control within a specific availability zone, adhering to subnet level settings.
VPC
Select a VPC in which to create the regional NAT gateway.
vpc-0564a8a9a1e0be1c2
Connectivity type
Select a connectivity type for the NAT gateway.
Public
Private
Method of Elastic IP (EIP) allocation Info
Choose how IP addresses are associated with NAT gateways.
Automatic
AWS automatically manages EIPs and AZ coverage for NAT gateways. This ensures easy scaling-- adding AZs automatically allocates EIPs, simplifying management.
Manual
Manually assigns specific IP addresses for compliance or whitelisting. Note: Requires manual scaling to new AZs as workloads expand.
Tags
A tag is a label that you assign to an AWS resource. Each tag consists of a key and an optional value. You can use tags to search and filter your resources or track your AWS costs.
Key
Value - optional
Name
Private-NAT
Remove
Add new tag
You can add 49 more tags.
